

PAPI: Tackling NVIDIA and AMD Emerging Architectures

Treece Burgess

Scalable Tools Workshop
July 26-30, 2026

PAPI

**INNOVATIVE
COMPUTING LABORATORY**

**THE UNIVERSITY OF
TENNESSEE
KNOXVILLE**

PAPI

- PAPI offers a **universal interface** and **methodology** for monitoring **performance counters** from diverse **hardware and software components**

WHY DOES IT MATTER?

- **If you can't measure it, you can't improve it!**
- PAPI enables app developers to see, in near real time, the relation between **SW performance** and **HW events** across the entire compute system

PAPI

- PAPI offers a **universal interface** and **methodology** for monitoring **performance counters** from diverse **hardware and software components**

WHY DOES IT MATTER?

- **If you can't measure it, you can't improve it!**
- PAPI enables app developers to see, in near real time, the relation between **SW performance** and **HW events** across the entire compute system

SUPPORTED ARCHITECTURES:

- **AMD CPUs** up to Zen 5
- **ARM, ARM64** up to ARMv8, ARMv9 (including Cortex and Neoverse series)
- **IBM Power Series** up to Power10
- **Intel CPUs** up to (Server Gen 6) Granite Rapids
- **Intel hybrid CPUs (P-cores and E-cores)** support up to Raptor Lake

1999 - 2009

PAPI

2009 - 2018

- PAPI offers a **universal interface** and **methodology** for monitoring **performance counters** from diverse **hardware and software components**

WHY DOES IT MATTER?

- **If you can't measure it, you can't improve it!**
- PAPI enables app developers to see, in near real time, the relation between **SW performance** and **HW events** across the entire compute system

SUPPORTED ARCHITECTURES:

- **AMD CPUs** up to Zen 5
- **AMD GPUs** up to MI325X
- **AMD APUs** up to MI300A
- **ARM, ARM64** up to ARMv8, ARMv9 (including Cortex and Neoverse series)
- **HPE Cray interconnects:** Slingshot Cassini, Gemini, Aries
- **IBM Power Series** up to Power10
- **Intel CPUs** up to (Server Gen 6) Granite Rapids
- **Intel hybrid CPUs (P-cores and E-cores)** support up to Raptor Lake
- **Intel GPUs** up to Battlemage B580

- **InfiniBand interconnect**
- **Lustre FS**
- **NVIDIA GPUs** up to Blackwell; Support for multiple GPUs
- **NVIDIA NVLink:** support for GPU-to-GPU interconnect

PAPI

2009 - 2018

- PAPI offers a **universal interface** and **methodology** for monitoring **performance counters** from diverse **hardware and software components**

WHY DOES IT MATTER?

- **If you can't measure it, you can't improve it!**
- PAPI enables app developers to see, in near real time, the relation between **SW performance** and **HW events** across the entire compute system

SUPPORTED ARCHITECTURES:

- **AMD CPUs** up to Zen 5; **Power monitoring for Fam19h**
- **AMD GPUs** up to MI300X; **Power monitoring**
- **AMD APUs** up to MI300A; **Power, temperature, fan**
- **ARM, ARM64** up to ARMv8, ARMv9 (including Cortex and Neoverse series)
- **HPE Cray interconnects:** Slingshot Cassini, Gemini, Aries; **Power monitoring & capping**
- **IBM Power Series** up to Power10; **Power monitoring & capping support**
- **Intel CPUs** up to (Server Gen 6) Granite Rapids
- **Intel hybrid CPUs (P-cores and E-cores)** support up to Raptor Lake
- **Intel GPUs** up to Battlemage B580

- **Intel RAPL:** power/energy monitors & capping support
- **InfiniBand interconnect**
- **Lustre FS**
- **NVIDIA GPUs** up to Blackwell; Support for multiple GPUs
- **NVIDIA NVLink:** support for GPU-to-GPU interconnect
- **NVIDIA NVML** power/energy monitoring & capping support
- **Virtual Environments:** VMware, KVM, AMD Cloud, AWS Cloud

Legacy APIs

Perfworks
Metrics API

Notable additions:

- Device (**:device=**) and statistic (**:stat=**) qualifiers
 - Reduced the native event count from **hundred of thousands** to **tens of thousands** (e.g. 300K to 60K on an NVIDIA H100)
 - Cuda component handles default cases:

```
//User application code.
PAPI_add_named_event(..., "cuda::dram_bytes");
// Internally in the cuda component.
cuda::dram_bytes <- :device=0 <-:stat=avg
```
- Dynamic creation of CUDA context IF a user has not created one on the calling CPU thread (based on # from **:device=#**)
- Partially disabled Cuda component
- NVIDIA GPU presets

NVIDIA GPU Presets

44

- Introduced in PAPI release 7.2.0 were NVIDIA GPU presets, the first non-cpu presets available to users

Moving Forward:

- Expand supported NVIDIA GPUS -- RTX PRO 4500, RTX PRO 6000, etc
- Add NVIDIA GPU presets for memory hierarchy, memory traffic, and branching

Figure 4: Current Available NVIDIA GPU Presets

PAPI

INNOVATIVE
COMPUTING LABORATORY

THE UNIVERSITY OF

KNOXVILLE

Where Next for the Cuda and Cuda Range Component?

- Complete the ***cuda_range*** component for PAPI release 7.3.0
 - Exploring support for multiple pass events
- Expand support for NVIDIA GPU presets:
 - Target NVIDIA Blackwell architecture
 - Add presets beyond precision and floating point
- Performance comparison between the Perfworks Metrics API and Range Profiling API on Hopper and Blackwell architectures

rocm_smi vs amd_smi && rocm vs rocp_sdk...Which One?

- Case 1: A user compiles either **rocm_smi** *//* **amd_smi** or **rocm** *//* **rocp_sdk**
 - IF the ROCm version supports the underlying API then the component is compiled in
- Case 2: A user compiles either **rocm_smi && amd_smi** together or **rocm && rocp_sdk** together

Enabling the Latest Architecture and Version Support

- PAPI aims to support legacy and modern software/hardware releases for AMD, Intel, and NVIDIA; as a result, manual testing is cumbersome

Software Releases

+ Compilation errors (e.g. API naming schemes changed or structures introducing new member variables)

+ Dropped architectures (e.g. Cuda Toolkit 13.0.0 dropping offline compilation for per-Turing architectures)

Hardware Releases

+ Outdated and unsupported APIs (e.g. CUPTI Legacy APIs capped at CC 7.0)

+ Required driver versions

Figure 9: Possible Issues Encountered on Software/Hardware Releases

+ Required driver versions

Figure 9: Possible Issues Encountered on Software/Hardware Releases

- Oregon Advanced Computing Institute for Science and Technology (OACISS) allows PAPI to run continuous integration (CI) on legacy and modern software/hardware releases to detect early:
 - Bugs
 - Incompatibility between software and hardware
